Characteristics of Good Cosmetics

1) All the raw materials used should be of highest quality and should be standardised for their qualities.

2) All water used in cosmetics should be distilled or pure water.

3) The colour used should be permitted colour.

4) The perfumes used should be compatible with other ingredients of the preparation.

5) They should be tolerated a dark conditions particularly extreme of temperature and humidity condition to which they are likely to be encountered in the market.

6) They should be economic.

Demerits of cosmetics:

1) clogged pores - this does not let your skin breathe making it prone to take ^{ache} bumps, and other facial skin problems.

2) untimely aging - it causes skin damage premature aging like wrinkles, fine lines and age spots.

3) Dry or oily-skin-products that do not suit your skin may cause dry skin or oily skin

4) Break Out - Due to hormonal imbalance, medications and improper diet, trigger more break outs. Applying less neg up can improve your skin health and reduce black heads too

5) Allergic Reaction. Chemicals like paraben can cause allergic reactions

6) Colour change - collagen present in the skin may get damaged and lead to changes in your skin colour applying long lasting lip sticks - can block oxygen supply to your lips

7) Eye Infection: The skin areas around your eyes and eye lid are thin and delicate, any irritant in eye make up can cause either harm to eye leading to eye infection

8) Cancer: Formaldehyde (HCHO), coal tar, Arsenic, silica, chromium are known to be Carcinogenic that are used in cosmetics.

Carcinogenic
